

The INRIX Smart Delivery Suite

A comprehensive suite of solutions to ensure deliveries arrive safely and on-time, every time.

How We Can Help:

Optimize delivery routes to save time, money and fuel

Plan the perfect delivery schedule

Keep drivers and shipments safe with proactive alerts

Historical data for improved strategic planning

Manage customer expectations with more accurate ETAS

Detailed parking information to help with last-mile deliveries

An all-in-one, map agnostic solution for smarter, safer and more reliable deliveries.

In today's increasingly mobile-first world, instantaneous delivery is no longer a luxury; it's an expectation. This urgent demand puts businesses in the hot seat, challenging them to streamline logistics to deliver on time, every time.

To help companies address this challenge, we launched the **INRIX Smart Delivery Suite**. This groundbreaking suite of solutions designed to help businesses effortlessly outsmart traffic, optimize delivery schedules, and provide spot-on ETAs to keep customers delighted.

In an age where every second and every mile counts, ensuring deliveries arrive on-time is not just a service – it's a promise that directly translates to happier customers and a healthier bottom line.

Whether you're transporting packages, pizza, or people, the INRIX Smart Delivery Suite provides a comprehensive set of tools to ensure your deliveries aren't just on time—but also optimized, safe, and reliable from start to finish.

Key Features of the INRIX Smart Delivery Suite

This all-in-one suite provides high quality data/services that can be used to help outsmart traffic, optimize delivery schedules, and stay safe on the road.

Routing Engine Uses Real-Time, Historical & Predictive Roadway Information

Our routing engine employs a forward-looking algorithm to analyze current traffic and predict its changes during a journey, integrating real-time, historical, and predictive data, along with road closures and incidents, for the most informed route planning.

More Accurate ETAs

Drivers will have peace of mind knowing that they'll arrive at their destination on time.

Comprehensive Traffic Info

From highways to side-streets, our traffic data covers over 5 million miles of roads in 47 countries

Real-Time Roadway Alerts & High Quality Incidents Data

Based on real-time data from vehicles on the road, proactive location-based notifications warn drivers and of sudden reductions in speed or stopped traffic on the roadway. We provide the most comprehensive and accurate dataset of anomalous roadway conditions about congestion, crashes, construction and road closures using data from 500+ sources.

Detailed Parking Info

Including on-street restrictions and availability predictions to find legal parking in busy areas.

Map Agnostic

Map agnostic APIs make us the preferred choice if using OSM or custom map/routing solutions.

We Can Help, Whether You're Delivering A Person, A Package or Pizza

Rideshare Services

We power rideshare services with mobility intelligence to help them get customers where they need to go faster, safer, and more efficiently.

Package Delivery Services

Traffic insights to better schedule delivery times, optimize routes, and real-time alerts to notify drivers who are at risk of encountering a dangerous slowdown or queue.

Food Delivery Services

INRIX is helping over 20% of the food delivery industry optimize deliveries to make sure their customers stay happy and don't go hungry.
